- medication usage (%)

Age at First Experience of  
Anxiety / Depression

- age group
- country / region

mental illness prevalence  
- type of disorders

Approaches to deal with  
Anxiety / Depression  
- approaches

## QUESTION

- 1) Is the visualization method effective in conveying the insights?
- 2) Are there any technical challenges in implementing these visualisation?
- 3) Will the visualisation be too overwhelming?

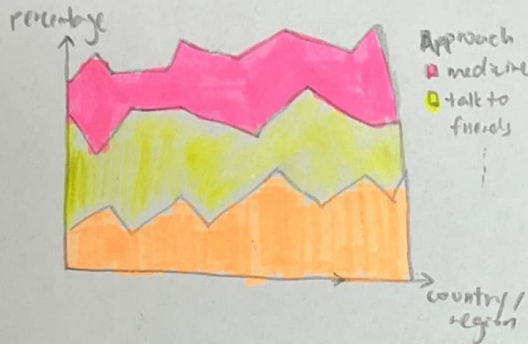

# LAYOUT

Age Group

- < 13
- 13-19
- 20-29
- 30-39
- ≥ 40

## FOCUS

in map visualisation:

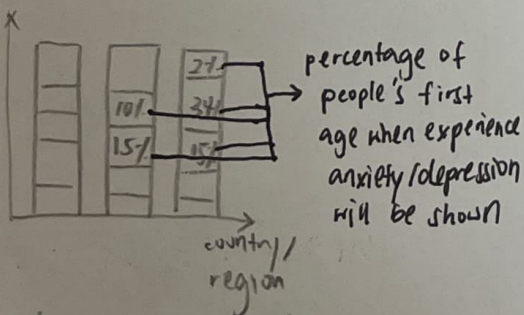

Highest Medication Usage at 76 %.

Lowest Medication Usage at 16 %.

country will no data ; will show a tooltip like this when hover :

Data is not available in...

percentage of mental illness prevalence will be shown, total will add up to 100 %.

the points here shows the percentage of people who tried the method in each different country.

Title : Mental Health Insights

Author : Jace Ang Khai Shuan

Date : 6 October 2024 Sheet : 2

Task : Map for global medication usage, stacked bar chart for age at first experienced, pie chart for mental illness prevalence, area chart for approaches dealing with anxiety / depression

## OPERATIONS

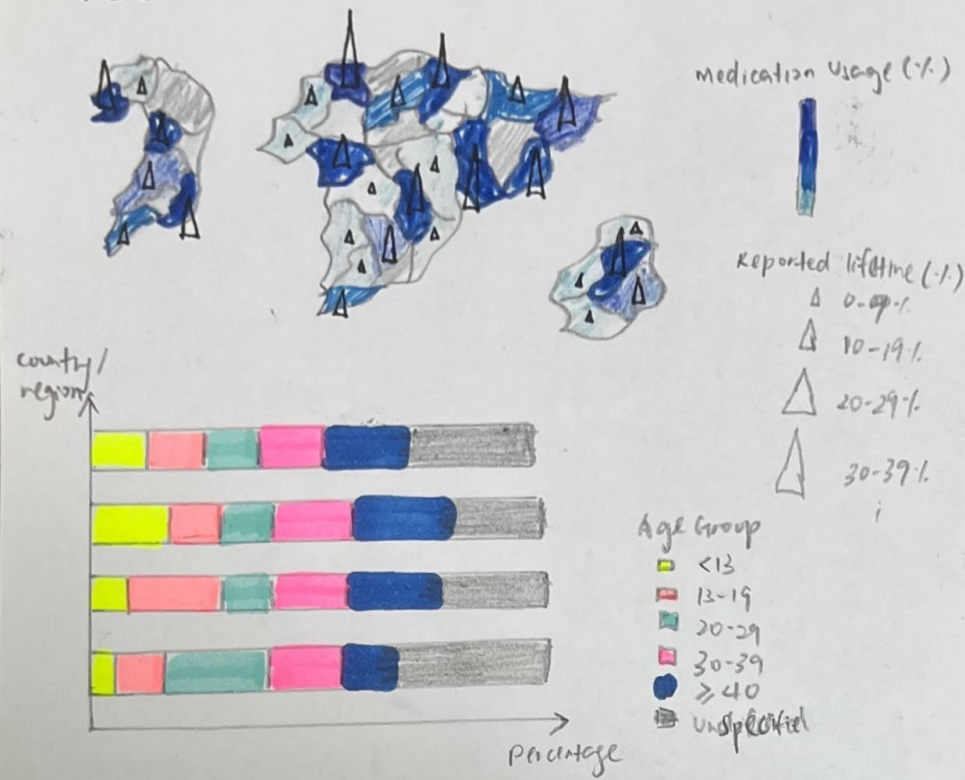

- Global medication usage for anxiety / depression
  - hover over the country to view the exact percentage of medication usage
  - light blue represents low medication usage
  - dark blue represents high medication usage
  - grey represents country that has no data
- Age at first experience anxiety / depression
  - percentage will be shown on top of each bar
  - hover over to view the details: country, age group, and percentage
- Mental illness prevalence in Malaysia
  - hover to view the mental illness type and percentage
  - click on it to show all percentage of each mental illness
- Approaches dealing with anxiety / depression
  - hover over each point to view the exact percentage and country for the specific approach

## DISCUSSION

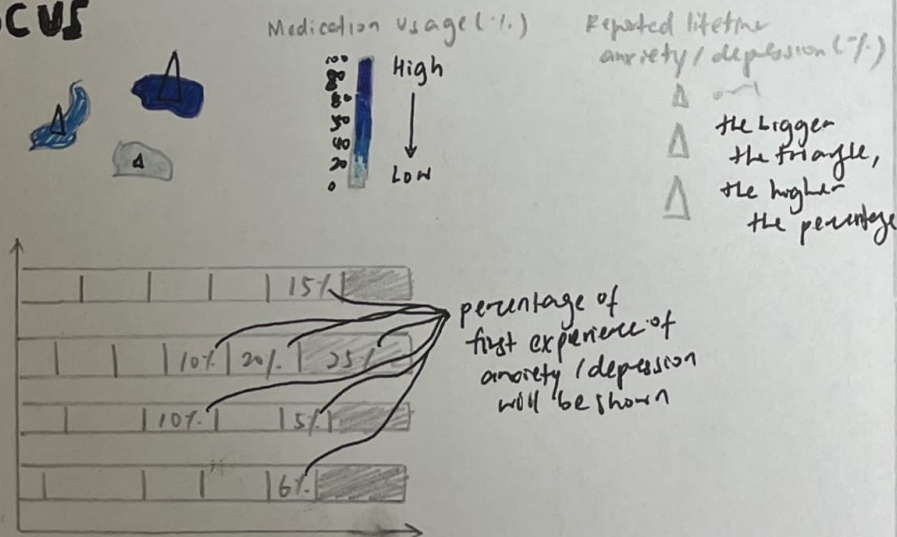

- +**ve :
- all countries are included for medication usage, good for comparison on each country.
  - easy to compare for each country / region which age group are more likely to first experience anxiety / depression.
  - all countries are included to compare the approaches used.
- ve :
- not all countries have the data of medication usage
  - the approaches will be too overwhelming for considering all countries.

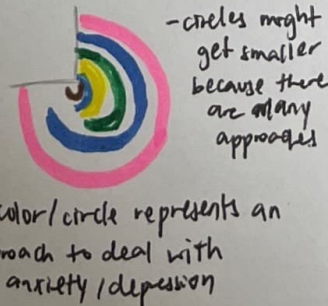

# LAYOUT

## FOCUS

Note: Unspecified means the respondents who refused to answer their age.

Title: Mental Health Insights

Author: Jace Ang Khai Shuan

Date: 7 October 2024

Sheet: 3

Task: Map for global medication usage and share who reported lifetime anxiety/depression, horizontal stacked bar chart for first experienced, donut chart for mental illness prevalence, spiral chart for approaches dealing with anxiety/depression

## OPERATIONS

- 1) Global medication usage & lifetime anxiety and depression
  - hover over the country to view the exact percentage of medication usage and reported lifetime anxiety/depression
  - color to represents medication usage
  - shape (triangle) and size to represent reported lifetime anxiety/depression
- 2) Age at first experience anxiety/depression
  - percentage will be shown on top of each bar
  - hover over to view the details: country/region, age group, and percentage
- 3) mental illness prevalence in Malaysia
  - hover to view the details: disorder and percentage
- 4) Approaches dealing with anxiety/depression in Malaysia
  - hover over each circle to show the exact percentage of people using the specific approach

## DISCUSSION

- Pro: - all countries are included for the medication usage, and lifetime reported, very detailed map visualisation
- easier to compare the age group for each country, can get the insight of which age group is more likely to be the first age that experienced.
- simple and clear donut chart, so that it looks more neat and clean
- ve: - too much details, make the map visualisation looks complicated
- the spiral chart might gets too overwhelmed as we have many different approaches

# LAYOUT

■ medication

## FOCUS

added ocean and grey layer to the map

country will no data, use tooltip to show

lowest medication usage at 16%.

show details of Age Group, country/region, and percentage in tooltip like this:

country: ~  
Age Group: 13-19  
Percentage: 20%

Approaches dealing with anxiety / depression in Malaysia

- color represents the type of disorders

- thickness of the connections shows the percentage of mental illness prevalence in specific region

- the thicker it is, the higher the percentage is.

→ color represents different approaches to deal with anxiety/depression

→ the bigger the part is, the higher the percentage.

Title: Mental Health Insights

Author: Jace Ang Khai Shuan

Date: 8 October 2024

Sheet: 4

Task: Map (+ocean & grey layer) for global medication usage, area chart for age at first experienced, sankey diagram for mental illness prevalence (by region), radial chart for approaches dealing with anxiety/depression

## OPERATIONS

- 1) Global medication usage for anxiety and depression
  - hover over the country to view the exact percentage of medication usage
  - highest and lowest medication usage will be shown using annotations
  - if hover over country that has no data, will show in tooltip
- 2) Age at first experience anxiety / depression
  - details of Age Group, country/region, and percentage will be shown in tooltip. (when hover over the point)
- 3) Mental illness prevalence
  - hover over to view the details: region, type of disorder and exact percentage.
- 4) Approaches dealing with anxiety / depression in Malaysia
  - hover over to view the details: approach, percentage of people that use the specific approach

## DISCUSSION

- ➕ve: - map visualisation is more detailed and not empty.
- the area chart shows better comparison for each age group that first experienced anxiety/depression (overall)
  - sankey diagram shows more information (each region, which disorder occurs more)
  - radial show all the approaches clearly, vary in size
- ➖ve: - area chart might be confusing to some, as the x-axis represents country/region, when it normally shows years.
- sankey might be a bit overwhelmed, as we have many more regions and disorders.

# LAYOUT

## Global Medication Usage for Anxiety and Depression

## Age at First Experience of Anxiety or Depression

■ <13 ■ 13-19 ■ 20-29 ■ 30-39 ■ >40 ■ unspecified

## A Glimpse into Mental Health in Malaysia

### Prevalence of Mental Disorders

### Coping Approaches

## FOCUS

add annotations:

Highest  
Medical usage  
at 76.72%.

Lowest  
Medical usage  
at 15.96%.

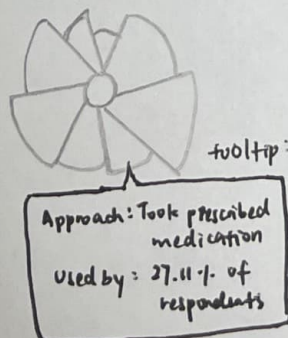

tooltip for country that  
has no data:

Data is not available in (country name)

add annotations below horizontal stacked bar chart:

Note: 'Unspecified' refers to respondents who either did not provide an age or refused to answer.

(to clarify in case of confusion)

Title: Mental Health Insights

Date: 8 October 2024

Sheet: 5

Task: final Design

## OPERATIONS

- 1) Global Medication Usage for Anxiety and Depression
  - hover over the country to view the exact percentage of medication usage
  - color indicating if the percentage is high / low
  - if hover over country that has no data (in grey color), data not available will be shown in tooltip
- 2) Age at First Experience of Anxiety or Depression
  - hover to view the details: country / region, age group, and the exact percentage
  - color hue indicating different age group
  - unspecified explanation is shown using annotation
- 3) Prevalence of Mental Disorders in Malaysia
  - hover over to view the type of disorder and its percentage
  - annotations are added for the major mental disorders
- 4) Coping Approaches in Malaysia
  - hover over to view the approaches and percentage of people that used that approach to deal with anxiety or depression

## DETAIL

- Database implemented using CSV files.
- Resources are from Our World in Data.
- Web design using HTML, CSS, and Javascript (to implement the charts into HTML)
- All charts are implementing in the json files, using Vega-Lite.
- Datasets will need some cleaning as not all datasets are useful.
- Color choice based on the data (color luminance for quantitative, and color hue for categorical)
- Estimated time to build: 5 days.
